

ASP.NET Notes (Class October 14, 2011)

1. Download the latest version of EmployeeTraining_V6 from the syllabus
2. In the Project folder on Desktop, replace EmployeeTraining_V3 with EmployeeTraining_V6
3. Update the database by running the createDatabase.bat, as follows:
 - On Desktop, open the Project folder/EmployeeTraining/database/double click CreateDatabase.bat
 - Open Sql Server Management Studio, click refresh and verify if the EmployeeTraining database is updated.

4. To run the EmployeeTraining via Debug in Visual Studio:

Open Visual Studio, double click on EmployeeTraining, then right click Default.aspx on the right panel/view in browser/should see the Welcome page with XYZ in the center.

5. To run the EmployeeTraining via localhost requires some configuration in IIS, as follows:

Start/right click my Computer/Manage/expand Services and Applications/IIS/expand Sites/right click EmployeeTraining/from here we need to do the following:

- a) *Add IUSR:*
Edit/Permission/Security/Edit/Add/Advanced/Find Now/Click IUSR/ok/ok/ok.
 - b) *Add IIS_USR:*
Edit/Permission/Security/Edit/Add/Advanced/Find Now/Click IIS_USR/ok/ok/ok.
 - c) *Set the Basic Settings:*
On the right panel, click Stop/click Basic Settings/click Select button/ASP.NET v4.0/ok/
 - d) *Set "Local System":*
Click the Application Pools which is above Sites/click Stop on the right panel/Advanced Settings/Identity/scroll down and select "Local System"/ok/
 - e) Expand Sites/EmployeeTraining/on the right panel click Start/
6. Open Internet Explorer/type localhost/should see the Welcome.page with XYZ in the center.
